

Dr. Yi Ling

Office: T5508**Phone number:** 13691790418**Email:** lingyi@hit.edu.cn**Office hours:** By appointment**Text book:** *Calculus* Thomas Jr., George B. 14th Edition Addison Wesley**Lecture Time:** See your class schedule**Sections:** We will cover most or all of sections:

2.1-2.6; 3.1-3.9; 4.1-4.7; 5.1-5.6; 7.1-7.7; 8.1-8.8.

Course Description: Calculus is the first of sequence in calculus-a mathematical tool for analyzing changes in physical quantities. This course provides an introduction to limits, continuous functions, rate of change, derivatives, implicit differentiations, maximum and minimum points and their applications, the development and application of the definite integral. This course will help students develop their critical thinking, problem solving, and quantitative reasoning skills. This course provides a quantitative foundation for life-long learning.

Grading policy:

1. The grade will be based on the following items:

Item	Points
Homework	20
Mid Exam (90 min.)	30
Final exam (120 min.)	50
Total	100

2. The grading scale is:

$$| A \geq 90 | B \geq 80 | C \geq 70 | D \geq 60 | F < 60 |$$

3. All exams are in class and closed book.

Homework:

A suggested list of homework will be given each class to help you practice the material covered. students are strongly advised to do their homework on a daily basis.

Exams :

1. There will be one exam in the thirteen weeks of the semester. There will be a comprehensive final exam given during scheduled final exam period for this section. The final exam will place slightly more emphasis on the material covered after the exam. No calculators with symbolic or graphing capabilities are allowed on exams. Problems on exams will be similar but not necessarily identical to problems on the examples presented in the lecture, examples in the text and/or assignments.
2. It is very important and essential to observe the following on exams and assignments :
 - (a) You should explain all your work and give reasons to all your answers.
 - (b) You should present all the steps that lead to the answer in a complete and legible fashion.
 - (c) Unorganized work and calculations that are scattered does not earn full points.
 - (d) Correct answers without the correct work does not earn full points.

Teacher-Student Interaction, Follow-up, and Feedback:

1. You are encouraged to discuss with me any difficulties you have with the course as early as possible, in order not to fall behind.
2. It is very important to take advantage of office hours. If you cannot make it for one reason or the other, you can talk to me right after class in order to set up an appointment. You can also send me questions via e-mail or QQ.
3. You should not hesitate to ask questions during the lecture. Also, you should not hesitate to answer my questions. Your class participation will benefit you and your classmates and will provide me with instantaneous feed back on where you stand.

Attendance:

Students are expected to attend all classes. Students are expected to arrive on time and prepared for class. Students who arrive late are a distraction to other students and so late arrival should be avoided. An excused absence does not excuse the student from missed assignments nor does the absence change the due dates of assignments.
